RATANPIL®

Shielding Tape for panel fences

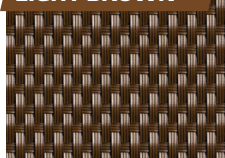

RATANPIL® screen for fence panels of 2.5 m width with 20 cm wire spacing is a perfect solution for shading of panel fences. It provides a feeling of privacy all year long. The screen is made of polyethylene - material used for food packaging. The material is thermally treated. Therefore, it does not unweave when it is cut. It can be cut in all directions without risking unweaving.
