

# Plastic pickets – PILPLAST®

Plastic fences are intended particularly for all customers requiring maintenance-free fence. The advantage of the fence elements and components is not only in their shape and color stability, but also resistance to UV radiation.

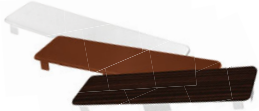

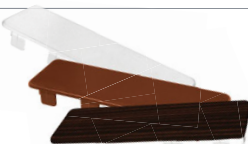

The fence profiles are provided with the same foil as used on plastic windows, which neatly supplements the appearance of your house.

Our offer includes profiles 70 × 22 mm and 100 × 30 mm, in total lengths of 6 meters. The profiles can be easily cut to required lengths and provided with cover cap.

The plastic profiles are manufacture by extrusion technology from resilient PVC with long service life and outstanding resistance to weathering. The same material is used for manufacture of extruded profiles for plastic windows.

The fence profiles serve for assembly of light fences, balconies, railings, pergolas, benches, various walls, barriers and shelters. The installation of the fence is quite fast and simple, requiring the minimum space, tools and knowledge of the installers.
